

## Dancers - Stephen D. Edwards, Woodinville, WA

Medium - Powder coated steel

\$4,200.00

sculpture **4**

Edwards has a great deal of respect for the power and discipline of dancers from observing his daughter dance. He designed and arranged cut out dancer shapes in a beautiful "dance-scape" at the end of a long, slender pole. Notice how your eye travels up toward the action of the dance. What kind of sculpture would you make to show your favorite sport or dance?

Notice the sense of unbalance Edwards created by placing large shapes on top of a delicate one. He used steel for this sculpture because steel is a strong enough material to support and balance the large dancers at the top. Can you imagine using some other material, such as stone or glass or marshmallows to make this sculpture?

Are there  
any other  
sculptures  
that use  
metal to  
create larger  
than life  
images?
